

Task 1:

Design of the analog computer of the different system

E.g., automobile suspension system

Also try it for the different differential equation as discussed in class.

Task 2:

Determine the value of  $\pi$  using the Monte Carlo technique.

(Try it changing the number of sample and compare the errors.)

Determine the value of integration using the Monte Carlo technique.

(Try it for at least 2 examples)

Task 3:

Generate random numbers and perform the uniformity test using Kolmogorov-Smirnov test with a level of significance  $\alpha=0.05$ .

(Perform the test for  $N=10, 15$  and  $20$ .)

## Kolmogorov- Smirnov test table:

Degrees of Freedom (N)	$D_{0.10}$	$D_{0.05}$	$D_{0.01}$
1	0.950	0.975	0.995
2	0.776	0.842	0.929
3	0.642	0.708	0.828
4	0.564	0.624	0.733
5	0.510	0.565	0.669
6	0.470	0.521	0.618
7	0.438	0.486	0.577
8	0.411	0.457	0.543
9	0.388	0.432	0.514
10	0.368	0.410	0.490
11	0.352	0.391	0.468
12	0.338	0.375	0.450
13	0.325	0.361	0.433
14	0.314	0.349	0.418
15	0.304	0.338	0.404
16	0.295	0.328	0.392
17	0.286	0.318	0.381
18	0.278	0.309	0.371
19	0.272	0.301	0.363
20	0.264	0.294	0.356
25	0.24	0.27	0.32
30	0.22	0.24	0.29
35	0.21	0.23	0.27
Over 35	$\frac{1.22}{\sqrt{N}}$	$\frac{1.36}{\sqrt{N}}$	$\frac{1.63}{\sqrt{N}}$

Task 4 : Generate random numbers and perform Chi-Square test with  $\alpha=0.05$ .

(Take 100 sample of random numbers and perform test for 2 sets of data.)

Percentage Points of the Chi-Square Distribution									
Degrees of Freedom	Probability of a larger value of $\chi^2$								
	0.99	0.95	0.90	0.75	0.50	0.25	0.10	0.05	0.01
1	0.000	0.004	0.016	0.102	0.455	1.32	2.71	3.84	6.63
2	0.020	0.103	0.211	0.575	1.386	2.77	4.61	5.99	9.21
3	0.115	0.352	0.584	1.212	2.366	4.11	6.25	7.81	11.34
4	0.297	0.711	1.064	1.923	3.357	5.39	7.78	9.49	13.28
5	0.554	1.145	1.610	2.675	4.351	6.63	9.24	11.07	15.09
6	0.872	1.635	2.204	3.455	5.348	7.84	10.64	12.59	16.81
7	1.239	2.167	2.833	4.255	6.346	9.04	12.02	14.07	18.48
8	1.647	2.733	3.490	5.071	7.344	10.22	13.36	15.51	20.09
9	2.088	3.325	4.168	5.899	8.343	11.39	14.68	16.92	21.67
10	2.558	3.940	4.865	6.737	9.342	12.55	15.99	18.31	23.21
11	3.053	4.575	5.578	7.584	10.341	13.70	17.28	19.68	24.72
12	3.571	5.226	6.304	8.438	11.340	14.85	18.55	21.03	26.22
13	4.107	5.892	7.042	9.299	12.340	15.98	19.81	22.36	27.69
14	4.660	6.571	7.790	10.165	13.339	17.12	21.06	23.68	29.14
15	5.229	7.261	8.547	11.037	14.339	18.25	22.31	25.00	30.58

Task 5: Generate random numbers and perform the run test (based on runs up and down) to test whether the hypothesis of independence can be accepted or rejected where  $\alpha=0.05$ .

(Generate 40 sample of random numbers and perform test for 2 sets of data.)

Use the critical value  $Z_{\alpha/2} = 1.96$ .

Task 6: Generate random numbers and perform the run test (based on runs above and below mean) to test whether the hypothesis of independence can be accepted or rejected where  $\alpha=0.05$ .

(Generate 40 sample of random numbers and perform test for 2 sets of data.)

Use the critical value  $Z_{\alpha/2} = 1.96$ .
